Tyler Fleming

Computer Science student · Penetration testing · Reverse engineering

Seaside, CA · tylerfleming32@gmail.com · linkedin.com/in/tylerjamesfleming · github.com/1onmyraft

EDUCATION

California State University, Monterey Bay · B.S. Computer Science — Expected May 2028

EXPERIENCE

Cybersecurity (Temporary) · Wagr — Oct 2026 – Present

- Security work for a skill-based betting app that handles real-money transactions.

Software Engineering Intern · NuggMD — Jul 2026 – Aug 2026 · Remote

- Pen-tested the production web platform of a HIPAA-regulated telehealth company with **2M+ patients**, using Burp Suite and working through the OWASP Top 10.
- Found and fixed multiple **critical-severity vulnerabilities**, including broken access control flaws (OWASP Top 10).
- Fixed a set of smaller bugs and broken behavior across the patient-facing site.

IT & Operations Assistant, Esports Lounge · CSU Monterey Bay — Apr 2025 – Present

- Keep 20+ gaming PCs running for campus esports events, from hardware upgrades and repairs to performance tuning.
- Push software deployments, OS updates and user profile changes through a central admin portal.
- Troubleshoot hardware and software problems for staff and players during daily operations.

Shipping Coordinator & Technical Assistant · NaturesTech Inc. — May 2022 – Jun 2024

- Ran a $5,000/month Google and Facebook Ads budget for the Shopify store, and shipped 1,000+ packages a month at a 98% on-time rate.

PROJECTS

Study Buddy · 1st place, OtterHack 2026 — Apr 2026

study-buddy.dev · Polar H10, Supabase, Rive, OpenAI Codex

- Came up with the idea and built it with two teammates: the app reads live ECG data from a Polar H10 chest strap, estimates stress from heart rate variability and other signals, and tells you when to take a break.
- Placed **1st of 21 teams** at CSUMB's AI hackathon and won the $1,000 prize. The app is live, and Fitbit and smartwatch support is in progress.

Game Client Reverse Engineering · Solo — C++ · IDA · Cheat Engine

- Reverse-engineered Fortnite's game client with IDA and Cheat Engine, mapping its memory structures in C++ and working out how its software protections operate.
- Documented the work in videos that reached **10M+ views** on TikTok and YouTube and built a following of 5,000+.

Crypto Trading Simulator · Team lead — Python

github.com/1onmyraft/trading-sim-group-project

- Led a 4-person team building a Python desktop app that simulates crypto trading on live CoinGecko prices, tracked in GitHub and Trello.

HONORS

- **1st of 21 teams**, OtterHack 2026 AI Hackathon, CSU Monterey Bay
- **7th in California (Division 2)**, ICPC Regional Programming Contest 2025, competing for CSUMB

SKILLS

Security	Web app penetration testing, OWASP Top 10, broken access control (IDOR), vulnerability remediation, reverse engineering, memory analysis
Languages	C++, Python, Java, Bash, PowerShell
Tools	Burp Suite, IDA, Cheat Engine, Linux, Windows, Git, GitHub, Supabase
